

Ingenuity. Imagination. Insight.

Vysus Group

Who we are

We are

Following a portfolio restructure, we are a fully focused leading, independent provider of digitally enabled, engineering and technical consultancy expertise, supporting owners and developers of energy, power and complex industrial assets and infrastructure.

Our story

We've been going for strength to strength for over 80 years, supporting the transformation of global energy infrastructure, working on complex and large-scale energy projects around the world, becoming one of the leading engineering consultancy partners of choice, adding capability and expertise through strategic acquisitions.

Our legacy and global scale

80+ years

Heritage

Employees worldwide

Our value proposition

At Vysus Group, we are committed to actively challenging convention to achieve great things.

We are driven by our belief in working hand-in-hand with clients and applying imaginative thinking to tackle complex and multi-layered challenges, head on.

Our deep knowledge and passion for rigorously improving operational performance, mitigating risk and optimising cost results in better decision making in an ever-changing world.

Reduce Risk

Maximum Operational Performance

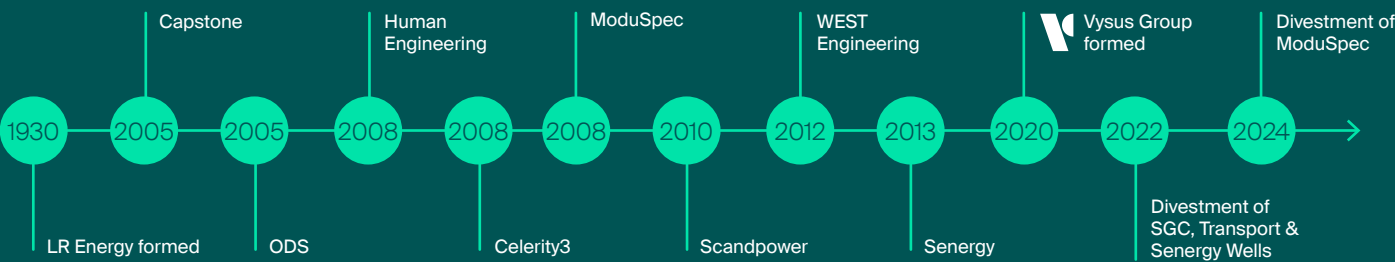

Optimise Capex and Operational spend

Make informed decisions

Our growth journey

Our core values

Our core values are the fabric of our organisation, at the heart of everything we do, supporting our growth aspirations and defining how we work with colleagues, clients and stakeholders.

Trust

We are trusted advisors. Independence and integrity are core to our approach to deliver innovative advice and proven solutions, in full consideration of all stakeholders, safety and the environment.

Partnership

We build strong relationships with our clients, partners and key stakeholders, working collaboratively and aligning our objectives to maximise performance and outcomes.

Passion

We are passionate in our commitment to delivering excellence with everything we do, driven to go above and beyond, seeking new knowledge and challenging the status quo. We fully recognise the power of diversity, in all its forms, to benefit our business, clients and our talented employees.

Our services

We work in partnership with owners and developers of energy, power and complex industrial assets and infrastructure, to interpret and manage complexity, reduce project risk and optimise asset performance. We provide independent perspectives, deep domain expertise and engineering excellence.

Asset Management

Improve reliability, optimising production, reducing cost and increasing profitability.

Nuclear power

We can help you to progress all aspects of your nuclear operations from safety assessment and licensing through to nuclear decommissioning and waste management.

Survey and geoengineering

Navigate hazards and avoid risks with accurate offshore subsurface surveys, ensuring confidence in your offshore construction and decommissioning projects.

Risk management

Our services help control risks to life, the environment and assets, ensuring compliance to regulatory and market requirements.

Energy transition

Powering the transition to clean energy by reducing project risk and optimising the asset performance of your transition and renewable energy assets.

Grid connection

Manage the integration of complex power systems into grid infrastructure to ensure stability and maximise power throughout.

Noise, vibration and machinery dynamics

We solve and prevent problems related to engineering dynamics for critical installations across the oil and gas, renewables, power generation, marine and rail sectors.

Pushing performance beyond expectations

300

Our Nuclear team has performed more than 300 Probabilistic Safety Assessments in Europe, Asia, North & South America.

2 million

Our Asset Management Consulting team has carried out over 2 million asset assessments.

100MW

Our Grid Connection team has provided technical support for the Hornsdale Power Reserve, one of the world's first 'big' utility scale lithium-ion batteries.

\$1bn

Our Asset Management Consultancy team has advised on asset evaluations in excess of \$1 billion over the past 12 months.

CO₂e

We have verified millions of tonnes of CO2 equivalent worldwide, covering refineries, drilling rigs, floating and fixed production assets and power generators.

50%

Our Survey and GeoEngineering team has supported approximately 50% of the UK's offshore wind projects.

70GW

We have supported over 70GW of offshore wind projects.

30% reduction

Our maintenance optimisation strategies can help you reduce costs by approximately 30%.

1st

We have one of the largest dedicated grid connection consultancies in Asia Pacific.

1st

Vysus was the first to perform risk analysis of unmanned platforms on the Norwegian Continental Shelf. The challenge was to balance maritime regulation with local regulations.

30%

Our digital HAZOP solution can save clients up to 30% cost savings compared with traditional HAZOPs.

>1,000 hours

Over 1,000 hours spent every year in safety and risk workshop facilitation.
